

At the Ralph H. Johnson VA Medical Center,

we have one goal - to provide the highest level of medical care and services for our nation's heroes. From the latest advances in cardiovascular medicine to disease prevention and management, our team is committed to ensuring your best health.

That is why total patient care is at the heart of everything we do. While one particular specialty may be at the center of any individual case, total care is the combined effort of all our medical, behavioral, and healthcare professionals working together to achieve your best health outcome.

Utilizing the latest in medical technology, treatment and prevention programs, our team of highly skilled medical professionals cares for thousands of veterans throughout the Lowcountry every year. Whether you are a World War II veteran or a service member who just returned from combat, you will find the excellent care and service you deserve at the Ralph H. Johnson VA Medical Center.

*We thank you for the
opportunity to care for you,
and we thank you for your
service to our country.*

Working together for better health

That's what we do every day at the Ralph H. Johnson VA Medical Center. Doctors work with nurses. Pharmacists work with therapists. And we all work with you to advance your good health. As a primary, secondary, and tertiary care facility, we provide a full range of patient care services to veterans along the South Carolina and Georgia coast. We also serve as a major education and research center to bring the latest in clinical advances to our patients.
